UviCure® Plus II Profiler
UV Power Puck® II Profiler

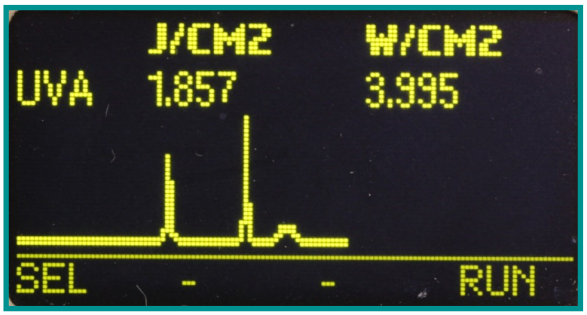
One Instrument: Two Options

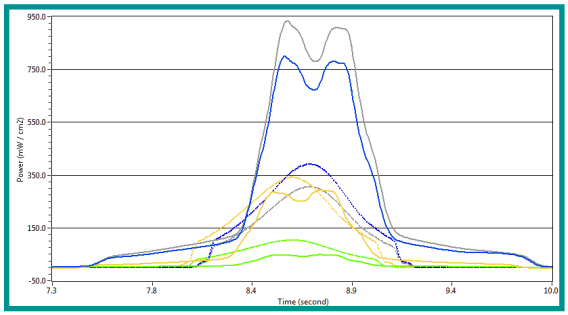
The UviCure Plus II Profiler and Power Puck II Profiler radiometers support:

- Easy-to-use single button operation for production or lab environments with all values on the display
- Profiling function for laboratory, R&D, field service and troubleshooting calls

One Instrument

Two Options





Display Option

- The ***Display Option*** presents the data (W/cm^2, J/cm^2 & low resolution irradiance profile) on the display
- Single button operation for ease of use on a production line

Profiler Option

- The ***Profiler Option*** transfers the data including the irradiance profile to a computer
- EIT 2.0's UV PowerView Software® III allows for further analysis, comparison and evaluation.

UviCure® Plus II Profiler & UV Power Puck® II Profiler

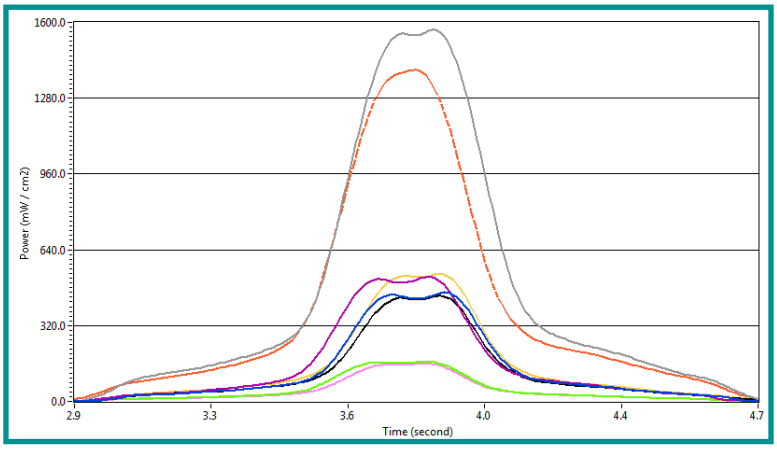
Profiler versions of the UviCure Plus II or UV Power Puck II operate in the same manner as Standard units, The Profiler function allows the transfer of the numerical (irradiance, energy density) values **and** the irradiance profile (Watts as a function of time) to a computer via a USB port for analysis with the EIT 2.0 UV PowerView Software® III Program.

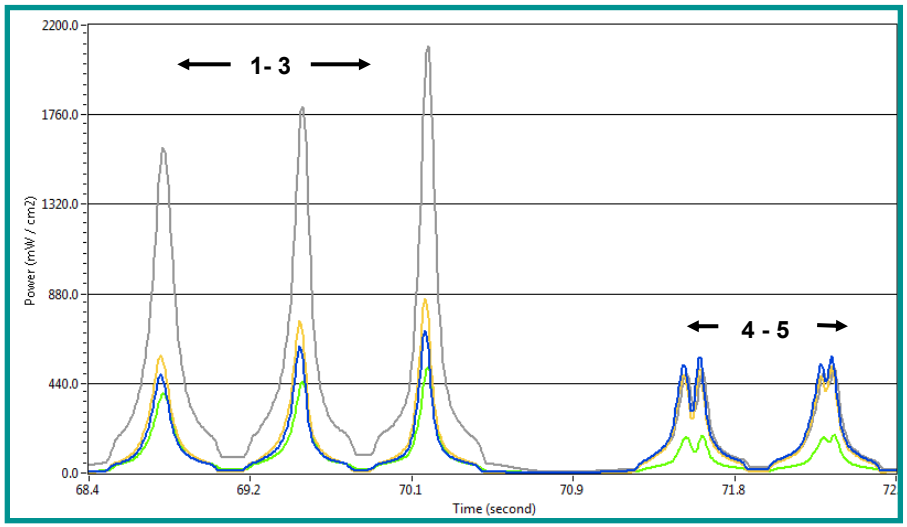
Puck Profiler Instrument Features:

- Profiler data collected at an effective sample rate of 128 Hz (samples/second)
- Display data collected at a user adjustable effective sample rate of 25, 128 or 2048 Hz (samples/second)
- Memory supports data collection of over 100 minutes

EIT 2.0 Profiler units quickly and easily identify:

- The number of lamps and individual lamp performance
- Lamp focus conditions and changes to the focus
- The bulb type (Four band Power Puck II Profilers)
- Uniformity of UV across bulb length changes over time with the comparison to stored files
- Process speed and/or exposure time variations
- Maintenance needs before they impact product quality





Five Production Line UV Stations

Lamps 1-3
- **Different output values**
- **Focused lamps**
- **Mercury-Gallium bulbs**

Lamps 4-5
- **Similar output values**
- **Non-focused lamps based on the "twin peaks" for each bulb**
- **Mercury bulbs**

Data can be arranged by parameter (shown) or bandwidth

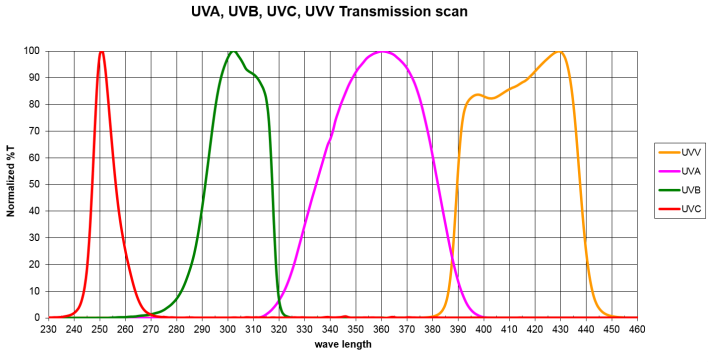
Dynamic (Operating) Ranges

There are three dynamic ranges available that are selected at the time of order.

- The standard range (10 Watt) works well for high power curing applications
- The mid-range (1 Watt) works well with low power arc lamps and in applications with lamps that are non focused or away from the cure surface
- The low range (100 mW) works well in exposure systems and applications with low power lamps

EIT 2.0 Bands

- EIT 2.0 Puck Instruments are available with UVA (320-390nm), UVB (280-320nm), UVC (250-260nm) and/or UVV (395-445nm)
- The UV Power Puck II is available only with all **four** EIT 2.0 bands, the UVICURE Plus II is available in any **one** EIT 2.0 Band, selected at the time of order



Product Specifications

Display	Easy to Read, Yellow Text on Black Background
Suggested Operating Ranges	Standard High Range: UVA, UVB, UVV- 100mW/cm² to 10W/cm² / UVC - 10mW/cm² to 1W/cm² Mid-Range: UVA, UVB, UVV-10mW/cm^2 to 1W/cm^2 / UVC-1mW/cm^2 to100mW /cm^2 Low Power: UVA, UVB, UVV- 1mW/cm² to 100mW/cm² / UVC -1mw/cm^2 to 100mW/cm^2 The suggested Operating Ranges are where the instrument performs best.
